

INTELLIGENT SOLUTIONS IN
BRAKE ADJUSTERS

The **FLEET** Advantage

BRAKE ADJUSTERS THAT KEEP YOUR FLEET SAFE GUARANTEED

No wonder Haldex is the world's leading supplier of brake adjusters for heavy commercial vehicles. In tests, imitations consistently fall far below Haldex performance standards. In fact, no copy has ever reached more than 50% of the life expectancy of a Haldex original. So, once they're fitted to your fleet, they'll carry on working superbly for longer. And that means less downtime or maintenance. What's more, every Haldex automatic brake adjuster supplied by authorised distributors and fitted to trucks or trailers is guaranteed for 3 years.

QUALITY ASSURED FOR SAFETY

Designed to withstand up to 2.5 million brake applications.

The Haldex range of brake adjusters includes new generation S-ABA self-setting automatic brake adjusters, the popular and well-established AA1 automatic brake adjuster and the TSS variant for trailers. All of them minimise the risk of overheating with their proven superiority of the clearance-sensing principle and slower intake than the competitor's products. For added efficiency and cost-effective fleet management, it also pays to fit the Haldex electronic lining wear sensor that continuously monitors the lining wear on drum brakes.

- **The Haldex S-ABA** is self-setting which revolutionises the installation procedure, making it faster and easier than ever before. The unprecedented positional flexibility of the Haldex S-ABA means it can effectively replace several other types of brake adjusters with fixed control arm positions. For a fleet with their own workshop it means less variants in stock and simplified stock handling.
- **The Haldex AA1** is the first clearance-sensing brake adjuster, a concept that was an original Haldex idea. The Haldex AA1 eliminates downtime caused by manual brake adjustment. It is designed to adjust gradually and maintain a constant clearance between the lining and the drum. It also counters overadjustment and overheating.
- **The Haldex TSS** is a variant of the AA1 that was specially developed for your fleet's trailers. The Haldex TSS enables you to maximise safety and efficiency by equipping the truck and trailer combinations in your fleet. This ensures optimal braking balance.
- **The Haldex Electronic Lining Wear Sensor** is the only system developed specifically for heavy vehicle drum brakes. It outlives the brake lining and can be reused on each new lining, reducing the cost of ownership over time.
